SUPPLEMENTARY MATERIAL

corresponding to:

A Sox5 gene is expressed in the myogenic lineage during trout embryonic development

PIERRE-YVES RESCAN and CECILE RALLIERE
Supplementary Fig. S1. 5' flanking sequence of the trout Pax7 gene. 2.8 kb of the DNA sequence upstream of the initiation codon is shown with putative Sox5 (underlined) and TATA (double-underlined) binding sites. The start of the Pax7 amino acid sequence is indicated.
